PROFESSIONAL SUMMARY

Data Engineer with 6+ years of experience designing batch and streaming pipelines for analytics platforms. Migrated a legacy warehouse to a lakehouse architecture, cut nightly pipeline runtime from 6 hours to 25 minutes, and owned ingestion for roughly 2 petabytes of event data per month. Deep experience with schema design, data-quality enforcement, and orchestration across Airflow, Spark, and dbt.

TECHNICAL SKILLS

Languages:	Python, SQL, Scala, Bash
Orchestration & Streaming:	Apache Airflow, Kafka, Spark, dbt
Storage & Warehousing:	Snowflake, BigQuery, Postgres, Parquet, Delta Lake
Cloud & Infrastructure:	AWS (S3, Glue, Redshift), Terraform, Docker, GitHub Actions
Quality & Observability:	Great Expectations, dbt tests, Grafana, Prometheus

PROFESSIONAL EXPERIENCE

Northwind Analytics — Mar 2022 – Present

Senior Data Engineer

- **Pipeline Ownership:** Own the ingestion platform behind 40+ internal dashboards and 3 customer-facing reports, processing approximately 2 petabytes of event data per month.
- **Performance:** Rebuilt a 6-hour nightly batch job as an incremental pipeline, reducing runtime to 25 minutes and removing the pre-dawn completion window that operations depended on.
- **Data Contracts:** Introduced schema contracts and automated quality gates, letting upstream teams ship changes without silently breaking downstream consumers.
- **Infrastructure:** Managed provisioning and cost across AWS and Terraform for a team of 6 engineers, including a migration to a lakehouse layout on Delta Lake.

Hallfield Logistics — Aug 2019 – Feb 2022

Data Engineer

- **Streaming Ingest:** Built the fleet-telemetry pipeline handling 1.2M GPS and arrival events per day, replacing a nightly CSV hand-off with Kafka-based streaming ingest.
- **Data Quality:** Built validation checks that caught malformed vehicle records before they reached operations, reducing missing-data support tickets by 60%.
- **Scale:** Supported the platform's growth from 12 to 900+ active vehicles without redesigning the ingestion contract.

PROFESSIONAL EXPERIENCE

Brookline Analytics **Sep 2018 – Jul 2019**
Junior Data Analyst
- **Reporting Automation:** Automated 4 recurring client reports previously assembled by hand, saving roughly 8 hours per week.
- **Analysis:** Produced margin, retention, and cohort reporting for retail clients, translating findings into non-technical summaries for store managers.

KEY PROJECTS

Pipeline Cost Monitor **Sole author.** Spend and runtime tracking for 200+ scheduled jobs, surfacing pipeline regressions before they reach a morning report. Link: Project page.

OpenETL **Maintainer.** Open-source Python library providing composable, testable extract-transform-load steps with built-in fixtures. Link: Project page.

EDUCATION

BSc (Hons) Computer Science **Oct 2015 – Jun 2018**
University of Bristol
